BUSINESS LOGIC ABSTRACTION OBJECTS

DATABASE	**LOGIC**	GATEWAY	INTERFACE

SQL TO REST

The SQL-REST object allow the ability to expose a SQL query as a REST API. The SQL query is executed in case of a request to the API and the response returned as JSON. In cases where business logic is a simple DB call, this can be used to avoid writing code

LAMBDA

In cases where SQL-REST API is not deemed sufficient, more complex custom business logic can be implemented via serverless Lambda functions that are executed in a sand-boxed Deno runtime. These functions are exposed via REST API Routes and are triggered on receipt of requests.
