API GATEWAY ABSTRACTION OBJECTS

DATABASE	LOGIC	**GATEWAY**	INTERFACE

AUTHN-AUTHZ

The authentication and access control abstraction objects enables the authentication of users of the applications created on the platform as well as setting up of access control rules of what a user is and not allowed.

USER INTERFACE ABSTRACTION OBJECTS

DATABASE	LOGIC	GATEWAY	INTERFACE

FRONT-END

The front-end objects allow the creation of the user interface. The objects that can be created are UI Components composed of widgets from the UI Library, Reducer objects that manipulate state, Thunk objects that perform side-effects and Custom-Code that add custom functionality
